

There are a couple types of spreaders available on the market today; Broadcast or Rotary spreaders and Drop spreaders. The easiest and most economical method is to set the spreader at its lowest setting in order to check the product flow characteristics. Establish a given area that you will be covering (i.e., if the rate is 3 lbs. per 1000 sq. ft., you will be treating a 20' x 50' area with 3 lbs.) Apply granules to the entire yard, making adjustments as needed. Next, crisscross the area until you have dispensed the entire product. Always read and follow label directions.

Below you will find a comprehensive chart of spreader settings listed for this product.

SPREADERS		PORTRAIT® GRANULES				
LBS. PER 1,000 SQ. FT.		LBS. PER 1,000 SQ. FT.		LBS. PER 1,000 SQ. FT.
